DevOps AS A SERVICE

We provide an end-to-end DevOps service to help you optimize your business success.

KEY BENEFITS

▶ Increase business agility

▶ Expense reduction

▶ Effective Collaboration

▶ Faster innovation adoption

▶ Reduced downtime & failures

▶ Product Quality

Why Choose Bespin Global for your DevOps needs

AWS DevOps Partner of the year

Top quality DevOps services competency proven by 2 consecutive years of AWS' regional DevOps Partner of the Year

Dedicated Lead DevOps Engineers

We provide a dedicated Lead DevOps Consultant as a single point of contact to coordinate with the client team on a regular basis.

Flexible Offering Structure

Wide range of service offerings to match your needs. Quickly scale up or down as needed.

Enhanced Security

Security First approach. Multilayer Security, consistent security monitoring.

Avoid Unnecessary Hiring Costs

Avoid high costs of finding, hiring, training, and retaining Cloud & DevOps experts and resources.

Predictable MoM Pricing

Reduce and control costs with a flexible pricing structure that is a base fee per month for the services which can scale up and down quickly w/o new contracts.

WHAT YOU GET: Our services & offerings

DevOps Assessment & Onboarding

We first work with you to understand your specific needs, then implement the appropriate tools for monitoring and management of the environment.

Designated Lead Engineer

Our resources are part of your team. We assign a team lead, who will work with you on day-to-day DevOps activities as your main point of contact

Production Monitoring & Operation

We monitor all elements of your environment 24/7 using native and 3rd party tools for a full 360 view of the environment.

CI/CD Pipeline Management

We create an efficient & fully-automated CI/CD pipeline to help your team focus on the important development work for your core product.

Deployment of Updates & Fixes

As updates to the underlying infrastructure become available, we coordinate with you to apply the updates to your environment.

Level 2/3 Technical Support

We investigate and resolve any technical issues identified through monitoring or support tickets.

HOW WE WORK:

DevOps Implementation Roadmap

01 Access & Strategize

Assess the current state, envision the future state and develop a strategy for transformation

02 Optimize Pipeline

Orchestrate the optimal value path, implement containerization, automate the deployment process, and capture metrics

03 Improve CI / CD

Create a robust CI/CD pipeline leveraging industry best practices and automated, best-in-class configuration tools

04 Automate Testing

Leverage Behavioral Driven Development, Test-Driven Development, and Acceptance Test-Driven Development

05 Monitor Performance

Detect, prioritize, and isolate application defects and their root causes before production deployment

06 Sustain Agility

Implement best practices for business agility, recovery, and sustained DevOps transformation
